### Get Clean!

If you forget to use a barrier cream or latex gloves to prevent your hands from getting sticky when using epoxy, don't use alcohol, acetone, or other solvents to clean them. Besides being harsh on your skin, those chemicals always leave a sticky residue no matter how many times you wipe your hands.

Instead use hand lotion to remove the epoxy residue. Just wash your hands with the lotion, rinse it off and then wash again with regular hand soap. It works like a charm and your hands will smell great!

### Gloves for CA

If you're allergic to latex, one thing that works really well as an alternative—and is really inexpensive—is to use cheap plastic sandwich bags to cover your hands. They work well and are thin enough that you can feel the heat of the glue as it sets.

This works really well when you are applying glass cloth with CA, because you can hold the cloth to the balsa and feel when the glue sets. It lets you use very little CA to put down the cloth and saves quite a bit of weight.

### Need a bench?

Need an extra workbench, yet don't have the space for a permanent one? How about an ironing board? It has a padded top (if you choose), is adjustable for height, and you can even sit down while covering or doing close-up work. Best of all, you can fold it up and put it away.
